***Allowable Subject Matter***

1. Claims 1-15 allowed.
2. The following is an examiner's statement of reasons for allowance:

None of the cited references in combination with other limitations of claim teaches or suggests an input apparatus that is a contact detection sensor, which is provided near a rotating component of said portable electronic device, and which detects contact by a living body or an object based on an input operation by said user with a portion of a surface of a cylindrical member as a detection area;

control means, which performs input processing for accepting input of a predetermined function in accordance with a contact position, a change in said contact position or the area of a contacted portion detected by said contact detection sensor, and which outputs an actuating signal based on a change in said contact position of or above a predetermined amount and/or the size of said area of said contacted portion, as disclosed in independent claims 1,7. The closest art (Lenchik et al. and Ando et al.) disclose related apparatus, either singularly or in combination fail to anticipate or suggest these limitations obvious.
